

Solar energy development event July 23 will feature excellent solar educational program and face-to-face deal making forum that is free for landowners.

[BrownfieldListings.com](#) is thrilled to announce another illuminating installment of its highly impactful and groundbreaking solar development series. Brought to you in collaboration with New Hampshire's Regional Planning Commissions and the New Jersey Institute of Technology, [Brightfields 2019 - New England](#) will take place at the Falls Event Center in beautiful downtown Manchester, New Hampshire on July 23rd. This dynamic and interactive one-day solar energy development event offers breakfast, lunch and the opportunity to connect to the solar industry's top experts—as well as to test your property's solar power potential.

Free for landowners, companies and communities with potential solar development sites (not rooftops), [Brightfields 2019 - New England](#) offers the rare chance to connect directly with solar developers, investors and professionals. Simply by entering one (1+) property of at least one (1+) acre in size into the event's Solar Market Mixer you can attend Brightfields 2019 - New England at no cost. In this open, no-obligation networking forum, potential brightfield projects will come to life as participants meet eye-to-eye and explore the solar development potential of thousands of greenfield, brownfield and landfill acres in the Northeast.

With substantial policy movement in states across the region recently, including sweeteners for brownfield-to-brightfield development in Rhode Island and new rules in Vermont to spur solar development on landfills and brownfields, Brightfields 2019 - New England will provide attendees with a timely brief on the current state of laws, incentives and programs impacting the solar space presented by the key agency staff and private sector professionals who know brightfield development best.

If you are a landowner, company or community interested in potentially pursuing a solar project on your land, then there's simply no better opportunity in the Northeast this summer to engage the market, explore your options, access solar pros, and test your site's potential in a live brightfield marketplace event.

And if you have a brownfield, landfill or other marginal acreage, then [Brightfields 2019 - New England](#) may be the only place to test its solar potential!
