CERTIFICATION

Wilcox & Barton, Inc. certifies the information presented in this report is factual and accurate to the best of its knowledge. This assessment was performed in accordance with American Society for Testing and Materials Standard E 1527-21 through a site inspection, interviews with persons knowledgeable of property operations, conditions, and history, and a review of reasonably attainable public records. It was not possible to verify all of the information developed or received within a reasonable amount of time. The findings and conclusions presented in this report are based on professional judgment and interpretation of the information and data obtained during this assessment.

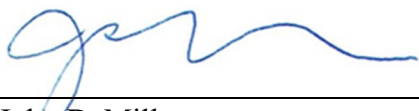

Madeleine B. Arold, Project Engineer, conducted the site inspection, reviewed state and local records, and was the primary author of this report. Ms. Arold has a bachelor's degree in Environmental Engineering from the University of Georgia and entered the environmental consulting field in 2019.

John DeMille, Senior Geologist, reviewed the state and local records and has reviewed the document for accuracy, content, and quality of presentation. Mr. DeMille is an environmental professional who maintains expertise in site inspections and has prepared and managed numerous environmental assessments.

Paul J. Plagge, Senior Engineer, has reviewed the consolidated document for accuracy and content. Mr. Plagge is an environmental professional with over 28 years of environmental consulting experience and has prepared and managed numerous environmental site assessments.

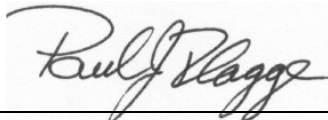

The undersigned herein declares that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional (as defined in §312.10 of 40 CFR§312) and have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the property. We have developed and performed the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Qualifications are presented in Attachment A.

John DeMille
Senior Geologist

Date: October 18, 2022

EXECUTIVE SUMMARY

Wilcox & Barton, Inc. has completed a Phase I Environmental Site Assessment of the property located at 11 North Main Street in Northfield, Vermont, in conformance with the scope and limitations of American Society for Testing and Materials Standard E 1527-21. The following findings are drawn from the information developed during the course of this assessment.

The subject of this assessment is one 1.3-acre parcel identified by the Town of Northfield Assessor's Office as Parcel ID 923023000 (SPAN: 441-139-10312). The property is located in a mixed-use area of Northfield, Vermont, and is currently vacant. The property was historically used for granite processing and finishing between approximately 1897 and 1942 and then again between 1986 and 1999. A gasoline filling station, automotive repair facility, and machine shop occupied the property from as early as 1960 until at least 1976. The property has been vacant since 2000, when the former structures associated with the granite processing and finishing facility were demolished. Portions of concrete building foundations and structural columns remain at the property.

Recognized environmental conditions (RECs), including historical recognized environmental conditions (HRECs), controlled recognized environmental conditions (CRECs), and de minimis conditions were evaluated by a site inspection and area reconnaissance, review of local, state, and federal records and databases, interviews with the current property owner, review of historical reports, and review of historical aerial photographs, Sanborn Fire Insurance Maps, topographic maps, and city directories. Certain conditions that raise a potential concern but that do not meet the definition of a REC are identified herein as "other environmental concerns." The conditions identified as "other environmental concerns" are presented for User awareness but do not appear to pose a threat to the subject property. The evaluation identified no RECs or "other environmental concerns" with the exception of the following:

1. Historical underground storage and documented release of petroleum at an adjacent property. An undocumented 500-gallon No. 2 fuel oil underground storage tank (UST) was encountered during excavation on the northern portion of the existing Dollar General property at 108 North Main Street on October 24, 2012. The UST was inadvertently damaged during excavation and approximately 100 gallons of oily water were released to the subsurface. The Vermont Department of Environmental Conservation (VTDEC) assigned Spill #2012WMD529 to the release condition. Response actions implemented to address the release of No. 2 heating oil included removal of the UST, recovery of oily water from the excavation, excavation and offsite disposal of impacted soil, and post-excavation soil sampling and analysis. Post-excavation soil sampling did not identify contaminant concentrations exceeding applicable standards. The damaged UST contents were reported to have impacted groundwater; however, groundwater sampling was not performed as part of or following UST closure activities. The VTDEC Spill Project was closed on December 12, 2012. Based on the regulatory status of the Spill Project, this finding would typically be considered an HREC; however, based on the absence of post-release groundwater analytical data and the location of the release area, immediately adjacent to the subject property, this finding is considered a REC.
2. Historical underground storage of petroleum at an undocumented location on the subject or adjacent property. The 11 North Main Street property is identified as UST Facility ID 4855711 for one 10,000-gallon UST containing No. 2 or No. 4 fuel oil that was removed in 1998. At this time, the subject parcel and southerly abutting parcel (108 North Main

EXECUTIVE SUMMARY

Street) were both identified as 11 North Main Street. No records documenting the location of the former 10,000-gallon UST or an associated UST closure assessment were identified; therefore, the UST may have been located on the subject parcel or on the adjacent 108 North Main Street parcel. The historical underground storage of petroleum at an undocumented location on the subject property or adjacent property is considered a REC.

3. Documented arsenic contamination at an adjacent property. Elevated concentrations of arsenic were detected in soil at the adjacent 108 North Main Street property during investigation performed in 2011. VTDEC assigned Site #2012-4284 to the release condition. During redevelopment of the property, shallow arsenic-impacted soil was buried under five feet of clean fill at the property in accordance with a VTDEC-approved Corrective Action Plan (CAP). Following implementation of the CAP, VTDEC indicated that the site would be eligible for Site Management Activity Completed (SMAC) designation following completion of monitoring well abandonment and recordation of a notice on the land record for the property. No records documenting completion of the well abandonment, recordation of the notice, or formal SMAC designation were identified during this assessment. The horizontal extent of arsenic contamination on the adjacent parcel was not fully defined and soil conditions on the subject parcel were not evaluated; therefore, the documented presence of arsenic contamination on the adjacent property is considered a REC.
4. Release of diesel fuel to asphalt pavement at an adjacent property. According to files on the VTDEC online database, a release of approximately 10 gallons of diesel fuel occurred at the 108 North Main Street property on September 5, 2020. The diesel was released from a vehicle to a limited area of asphalt pavement. VTDEC assigned Spill #2020WMD393 to the release condition. Response actions included deployment and recovery of absorbent materials to the impacted asphalt. No environmental media was impacted by the release. The spill project was closed on September 16, 2020. This finding is considered an “other environmental concern” and does not pose a threat to the subject property.
5. Current and historical underground storage and documented petroleum contamination at an adjacent property. The property located at 73 North Main Street is currently operated as a gasoline filling station. The property is located immediately west-southwest of the subject property, beyond North Main Street. According to available files on the VTDEC online database, elevated concentrations of petroleum compounds and lead were identified in soil and groundwater during investigation at the property in 2011. Available information indicates that the contaminant plume has not been defined and the responsible party is planning supplemental investigation to delineate the extent of petroleum-impacted groundwater along the eastern property line. The documented undefined petroleum contamination at the adjacent property is considered a REC.
6. Historical underground storage and release(s) of petroleum at an adjacent property. According to available files on the VTDEC online database, a 1989 site assessment identified soil contamination at the adjacent 127 North Main Street property. Available records did not indicate the type of contamination but does indicate soil was excavated and “landfarmed” on the property. The VTDEC issued a SMAC letter for the release condition on March 7, 1994. Available records also indicate one 10,000-gallon fuel oil UST was removed from the property in 1998, and one 12,000-gallon fuel oil UST was

EXECUTIVE SUMMARY

removed in 2017. During the 1998 UST removal, petroleum contamination was identified. The release condition was tracked by the VTDEC under Site #90-0619. A letter from the VTDEC, dated October 26, 1998, indicates that impacted soil encountered during UST removal was stockpiled at the property and the release was not likely to affect groundwater. The 1998 VTDEC letter indicates that laboratory analysis of post-excavation soil samples did not identify elevated concentrations of petroleum compounds and further investigation at the site was not warranted. No groundwater analytical data collected at the property was identified during this assessment. The absence of groundwater analytical data collected following the identified release conditions and the documented “landfarming” of petroleum-impacted soils at the property indicates that petroleum contamination may be present. Furthermore, no closure documents associated with the 2017 UST removal were identified during this assessment. Although the VTDEC database indicates the site was closed on June 21, 1999, based on the absence of groundwater analytical data and records documenting a closure assessment associated with the 2017 UST removal, this finding is considered a REC.

7. Historical industrial use and underground storage of petroleum at the subject property.
The subject property was used for various industrial uses beginning in the late 1800s until at least 1999. Historical property uses included granite processing, automotive repair, gasoline filling, and machining. These industrial operations would have included the use and storage of various types of oil and/or hazardous materials. A historical Sanborn Map from 1919 depicts a buried gasoline tank and an unidentified tank at the property. The long-term historical industrial uses of the property in addition to the underground storage of petroleum at the property is considered a REC.

The findings summarized above and described herein are supported by the following attachments.

User Reliance

This report has been prepared by Wilcox & Barton, Inc. for the use and benefit of, and may be relied upon by, Mr. Hugh McLaughlin, and his respective affiliates, subsidiaries, and assigns.

SUMMARY OF FINDINGS

INTRODUCTION	
Property Address	11 North Main Street, Northfield, Vermont
Tax Parcel	Parcel ID 923023000, SPAN: 441-139-10312
Date of Site Visit	October 11, 2022
User	Hugh McLaughlin
Anticipated Use of the Property	Multi-residential housing.
Special Terms & Conditions	None.
Scope of Work	See Attachment B.
Report Valid Through	April 2, 2023 (180 days from completion of first assessment activity).

PROPERTY DESCRIPTION	
Property Size	1.3 acres
Improvements	The property is currently vacant. Portions of concrete foundations and structural columns associated with former building(s) remain present. Photographs depicting existing conditions are presented in Attachment C.
Current/Most Recent Use	The property is currently vacant but was most recently used for granite processing and finishing activities. The property has been vacant since 1999 according to the Town of Northfield Historical Society.
Vicinity Characteristics	The property is located within a mixed-use area of Northfield. Adjacent properties are in commercial, industrial, and residential use as described below.
North	Multi-tenant commercial condominiums referred to as “The Gray Building.”
East	Dog River, beyond which are residential properties.
South	Dollar General retail store (108 North Main Street).
West	North Main Street, beyond which are commercial/industrial properties including a vinyl sign shop (127 North Main Street), furniture store (141 North Main Street), and True Value hardware store (93 North Main Street).

ENVIRONMENTAL SETTING	
Topography	The majority of the property is relatively flat with a gentle slope to the east towards Dog River. A sharp increase in elevation is present along the northern and eastern edges of the property. The subject property is located at an average elevation of approximately 720 feet above mean sea level. Local topography gradually decreases to the east and south towards Dog River. <i>Source: USGS Topographic Maps: Northfield, VT quadrangle, 7.5-minute, 2018.</i>
Surface Water	Dog River borders the eastern property boundary. The river flows to the north.
Flood Plain Data	The majority of the subject property is located in an area of minimal flood hazard. A portion of the subject property, which abuts Dog River, is considered “regulatory floodway” and an area of 1% annual chance flood with average depth less than one foot. <i>Source: Flood Insurance Rate Map Number 50023C0419E.</i>
Geology	Soils at the subject property are identified as “Machias” and “Adams,” which are described as fine sandy loam and loamy fine sand, respectively. <i>Source: US Department of Agriculture (USDA) Soil Conservation Service.</i>

SUMMARY OF FINDINGS

ENVIRONMENTAL SETTING

Hydrogeology	Groundwater at the property is presumed to flow in an easterly direction towards Dog River, consistent with topography.
---------------------	---

USER PROVIDED INFORMATION

Property Owners	Cetrangolo Finishing Works <i>Source:</i> Town of Northfield Listers.
Acquisition Date	According to the property owner representative, Mr. Nick Cetrangolo, the property was purchased circa 1956.
Environmental Liens or Use Limitations	None known or reported by User. <i>Note:</i> A formal search of title records for recorded liens or other encumbrances was not performed as part of this assessment.
User Specialized Knowledge	None. See Attachment D.
Occupant(s)	Unoccupied.

SUMMARY OF FINDINGS

REGULATORY DATABASE DISCUSSION

Wilcox & Barton, Inc. contracted Environmental Data Resources, Inc. (EDR) to perform an environmental database search. A comprehensive review of the relevant regulatory databases identified no environmental database findings or sites posing a risk to the subject property, with the following exceptions:

Subject Property

The subject property address (11 North Main Street) was listed in the following databases:

- VT SPILLS
- VT RGA HWS

Prior to September 28, 2012, the subject property and the adjacent Dollar General property composed one larger 3.03-acre parcel, identified as 11 North Main Street. Following division of the larger 3.03-acre parcel in September 2012, the subject parcel continued to be identified as 11 North Main Street and the abutting Dollar General parcel became 108 North Main Street. Although the subject property address was listed in the above-mentioned databases, the site name is referred to as “Dollar General.” Based on a review of available records (summarized below), the database listings are associated with the Dollar General property at 108 North Main Street parcel.

Historical underground storage and documented release of petroleum at an adjacent property.

Finding 1

- ☒ REC
- ☐ HREC
- ☐ CREC
- ☐ De minimis condition
- ☐ Other

Available files on the Vermont Department of Environmental Conservation (VTDEC) online database indicate that an undocumented 500-gallon No. 2 fuel oil underground storage tank (UST) was encountered during excavation for a stormwater drainage system on the northern portion of the existing Dollar General property at 108 North Main Street on October 24, 2012. The UST was inadvertently damaged during excavation and approximately 100 gallons of oily water were released to the subsurface. The VTDEC assigned Spill #2012WMD529 to the release condition and assigned UST Facility ID 5553973 to the property.

According to a 2012 UST Closure Report, prepared by Cardno ATC, which also documented closure activities associated with an undocumented 40-gallon hydraulic oil UST, response actions implemented to address the release of No. 2 heating oil included removal of the UST, recovery of 1,035 gallons of oily water from the excavation, excavation and offsite disposal of approximately 20 cubic yards of impacted soil, and post-excavation soil sampling and analysis. Laboratory analysis of post-excavation soil samples collected from the former No. 2 fuel oil UST excavation did not identify contaminant concentrations exceeding the applicable VTDEC standards. Additionally, laboratory analysis of UST closure samples collected from the vicinity of the former 40-gallon hydraulic oil UST did not identify contaminant concentrations exceeding the applicable VTDEC standards. According to the UST Closure Report, No. 2 fuel oil released from the UST mixed with groundwater in the excavation. The UST Closure Report indicated that laboratory analysis of a groundwater sample collected at the property in 2011 from a location approximately 20 feet southeast of the release area did not identify petroleum compounds at

SUMMARY OF FINDINGS

REGULATORY DATABASE DISCUSSION	
<p>Finding 2</p> <p> <input checked="" type="checkbox"/> REC <input type="checkbox"/> HREC <input type="checkbox"/> CREC <input type="checkbox"/> De minimis condition <input type="checkbox"/> Other </p>	<p>concentrations exceeding the applicable VTDEC standards. No groundwater sampling was performed as part of UST closure activities.</p> <p>The VTDEC indicated that no further work was required related to the UST removals and the Spill Project was closed December 12, 2012. Based on the regulatory status of the Spill Project, this finding would typically be considered an HREC; however, based on the absence of post-release groundwater analytical data and the location of the release area, immediately adjacent to the subject property, this finding is considered a REC.</p> <p><u>Historical underground storage of petroleum at an undocumented location on the subject or adjacent property.</u></p> <p>According to the VTDEC online database, the 11 North Main Street property is identified as UST Facility ID 4855711 for one 10,000-gallon UST containing No. 2 or No. 4 fuel oil that was removed in 1998. During a review of municipal files for 11 North Main Street, a UST Removal Form, dated January 28, 1999, indicated a 10,000-gallon UST was removed on September 21, 1998. No records documenting the location of the former 10,000-gallon UST were identified; therefore, the UST may have been located on the subject parcel or on the adjacent 108 North Main Street parcel. Additionally, no records documenting a closure assessment were identified. The historical underground storage of petroleum at an undocumented location on the subject property or adjacent property is considered a REC.</p>

SUMMARY OF FINDINGS

REGULATORY DATABASE DISCUSSION

Finding 3

- ☒ REC
- ☐ HREC
- ☐ CREC
- ☐ De minimis condition
- ☐ Other

According to the Northfield Town Clerk's Office, property addresses on North Main Street were revised to support updates to emergency response address information. The address updates were implemented in the early 2000s. Several database listings included in the EDR Report were confirmed to be referencing historical addresses and were therefore improperly mapped. Evaluation of the database listings identified the following findings of potential concern:

Documented arsenic contamination at an adjacent property.

According to files on the VTDEC online database, arsenic and chromium were detected at concentrations exceeding applicable standards in soil samples collected from 108 North Main Street during due diligence investigation in 2011. Chromium was also detected in the laboratory blank; therefore, it was assumed the elevated chromium concentrations were attributed to inadvertent laboratory cross contamination. Several additional contaminants, including VOCs and PCBs, were also detected in soil and groundwater samples, but at concentrations below applicable standards. VTDEC was notified of the elevated concentrations of arsenic and assigned Site #2012-4284 to the release condition. Supplemental investigation performed at the property in 2012 identified elevated concentrations of arsenic in soil across the site. Based on the elevated concentrations of arsenic in soil, VTDEC requested that corrective action be taken on-site during proposed site development activities to reduce potential exposure to future occupants or site workers. Site redevelopment was performed in accordance with a Corrective Action Plan (CAP), which was submitted to VTDEC in September 2012. During redevelopment, shallow arsenic-impacted soil was excavated and temporarily stockpiled onsite. The arsenic-impacted soil was later buried under five feet of clean fill at the property. Following implementation of the CAP, VTDEC indicated that the site would be eligible for Site Management Activity Completed (SMAC) designation following completion of the following activities:

- Proper abandonment of all onsite groundwater monitoring wells; and
- Recordation of a notice on the land record indicating that residual contamination is present in the subsurface at the property and notice to VTDEC is required prior to future subsurface work.

No records documenting completion of the above-listed requirements were identified during this assessment. Additionally, no SMAC designation for the 108 North Main Street property was identified during this assessment.

Investigation performed at 108 North Main Street did not delineate the horizontal extent of arsenic contamination and did not include evaluation of soil or groundwater quality on the subject parcel. The subject parcel was operated by the same occupant that historically operated the 108 North Main Street parcel. Based on the historical use of the subject parcel, the documented presence of arsenic contamination on the adjacent property is considered a REC.

SUMMARY OF FINDINGS

REGULATORY DATABASE DISCUSSION	
<p>Finding 4</p> <p> <input type="checkbox"/> REC <input type="checkbox"/> HREC <input type="checkbox"/> CREC <input type="checkbox"/> De minimis condition <input checked="" type="checkbox"/> Other </p>	<p><u>Release of diesel fuel to asphalt pavement at an adjacent property.</u></p> <p>According to files on the VTDEC online database, a release of approximately 10 gallons of diesel fuel occurred at the 108 North Main Street property on September 5, 2020. The diesel was released from a vehicle to a limited area of asphalt pavement. VTDEC assigned Spill #2020WMD393 to the release condition. Response actions included deployment and recovery of absorbent materials to the impacted asphalt. No environmental media was impacted by the release. The spill project was closed on September 16, 2020. This finding is considered an “other environmental concern” and does not pose a threat to the subject property.</p> <p><u>Current and historical underground storage and documented petroleum contamination at an adjacent property.</u></p> <p>The property located at 73 North Main Street is currently operated as a gasoline filling station. The property is located immediately west-southwest of the subject property, beyond North Main Street. The property is currently identified by VTDEC as UST Facility ID 1921 for four active USTs (gasoline, kerosene, and diesel) and seven former USTs (waste oil, fuel oil, gasoline, and diesel). According to available files on the VTDEC online database, elevated concentrations of petroleum compounds and lead were identified in soil and groundwater during investigation at the property in 2011. The release condition is identified by VTDEC as Site #2011-4199. The most recent technical submittal for the site available on the VTDEC online database is dated January 19, 2012. Available information indicates that the contaminant plume has not been defined. According to VTDEC, the responsible party is planning supplemental investigation to delineate the extent of petroleum-impacted groundwater along the eastern property line. The documented undefined petroleum contamination at the adjacent property is considered a REC.</p> <p><u>Historical underground storage and release(s) of petroleum at an adjacent property.</u></p> <p>The property located at 127 North Main Street (historically identified as 12 North Main Street) is identified by the VTDEC as UST Facility ID 4858600 for two former fuel oil USTs. According to available files on the VTDEC online database, a 1989 site assessment identified soil contamination at the property. Available records did not indicate the type of contamination but does indicate soil was excavated and “landfarmed” on the property. The VTDEC issued a SMAC letter for the release condition on March 7, 1994.</p> <p>According to available records, one 10,000-gallon No. 2 or No. 4 fuel oil UST was removed from the property in 1998, and one 12,000-gallon No. 2 or No. 4 fuel oil UST was removed in 2017. During the 1998 UST removal, petroleum contamination was identified. The release condition was tracked by the VTDEC under Site #90-0619. A letter from the VTDEC, dated October 26, 1998, indicates that impacted soil encountered during UST removal was stockpiled at the property and the release was not likely to affect groundwater. The 1998 VTDEC letter indicates that laboratory</p>

SUMMARY OF FINDINGS

REGULATORY DATABASE DISCUSSION	
	<p>analysis of post-excavation soil samples did not identify elevated concentrations of petroleum compounds and further investigation at the site was not warranted. No groundwater analytical data collected at the property was identified during this assessment. The absence of groundwater analytical data collected following the identified release conditions and the documented “landfarming” of petroleum-impacted soils at the property indicates that petroleum contamination may be present. Furthermore, no closure documents associated with the 2017 UST removal were identified during this assessment. Although the VTDEC database indicates the site was closed on June 21, 1999, based on the absence of groundwater analytical data and records documenting a closure assessment associated with the 2017 UST removal, this finding is considered a REC.</p>
HISTORICAL USES	
Aerial Photographs	
Subject Property	<p>2006-2016 The subject property appears to be vacant with a gravel parking lot along North Main Street. Concrete debris and/or foundation is visible in the center of the property.</p> <p>1986-1996 The image is blurry, but a building covering the subject property and abutting 108 North Street property is depicted</p> <p>1960-1976 The image is blurry, but the property appears as the auto repair facility with dispensing canopy.</p> <p>1942 A large building covering the subject property and abutting 108 North Street property is depicted.</p>
Adjoining Parcels	<p>1942-2016 Adjoining parcels appear to be in commercial/industrial use.</p>
Sanborn Maps	
Subject Property	<p>1897 The property appears as part of the “Cross Bros. Granite Works” operation which encompasses the adjacent 108 North Main Street property. A blacksmith forgery building is located along Dog River, which connects to a stone cutting building, “cutting shed” and “granite sawing & machine shop”. A carriage shop/painting building and attached building labelled as a blacksmith is located along North Main Street.</p> <p>1903 The site features depicted on the 1897 Sanborn Map are present. An apparent railroad side track is depicted on the western portion of the property.</p> <p>1910 The site features depicted on the 1897 and 1903 Sanborn Maps are depicted; however, the building along North Main Street is now labelled as a saddlery with attached blacksmith. A machine shop is depicted on the southwestern corner of the parcel. The subject and adjacent 108 North Main Street property are now labelled “Cross Bros. – Granite Manufacturers.”</p> <p>1919</p>

SUMMARY OF FINDINGS

HISTORICAL USES	
<p>Finding 7</p> <p> <input checked="" type="checkbox"/> REC <input type="checkbox"/> HREC <input type="checkbox"/> CREC <input type="checkbox"/> De minimis condition <input type="checkbox"/> Other </p>	<p>The site features depicted on the 1897, 1903, and 1910 Sanborn Maps are depicted; however, the building located along North Main Street is labelled as a machine shop with printing and repairing rooms and is identified as “Cross Bros. Garage.” A buried gasoline tank is depicted along North Main Street. A separate feature identified as “tank” is depicted on the central portion of the subject parcel. A “conveyor” is depicted on the eastern portion of the property and is connected to a “dust collector.”</p> <p>1926 and 1940</p> <p>The site features depicted on the 1897, 1903, 1910, and 1919 Sanborn Maps are depicted; however, the property and adjacent property to the south is now identified as “Cross Bros. Co. Granite Manufacturers & Garage.” No tanks are depicted.</p> <p>1962</p> <p>The property is depicted as a filling station, automotive repair facility, and machine shop.</p> <p><u>Historical industrial use and underground storage of petroleum at the subject property.</u></p> <p>The long-term historical uses of the property for granite processing, automotive repair, gasoline filling, and machining would have included the use and storage of various types of oil and/or hazardous materials. A buried gasoline tank and an unidentified tank were depicted on the property in the 1919 Sanborn Map. The long-term historical industrial uses of the property in addition to the underground storage of petroleum at the property is considered a REC.</p>
Adjoining Parcels	<p>1897-1903</p> <p>A railroad spur runs across North Main Street to the 108 North Main Street property, identified as “Cross Bros. Granite Works” in conjunction with the subject property. A “Chinese laundry” facility is located along the southern property line of the 108 North Main Street property. Northfield School is depicted to the north.</p> <p>1910-1940</p> <p>The “Chinese laundry” facility no longer is depicted on the 108 North Main Street property. Beginning in 1926, a gasoline underground storage tank is depicted on the 73 North Main Street property (in use as a garage) and an oil tank is depicted along Water Street on the 93 North Main Street property.</p> <p>1962</p> <p>The 108 North Main Street property is now identified as “Cetrangolo Granite Finishing.”</p> <p>Environmental concerns associated with adjacent and nearby properties were presented in previous sections of this report.</p>
City Directories	
Subject Property	<p>1995-2017</p> <p>The 11 North Main Street address appears to have been assigned to the subject parcel when a larger parcel incorporating the subject property and 108 North Main Street was split. The address 11 North Main Street was not identified in City Directory reports searched by EDR.</p>
Adjoining Parcels	1995-2017

SUMMARY OF FINDINGS

HISTORICAL USES	
	Adjoining parcels appear to be in commercial/industrial use.
Historical Topo Maps	
Subject and Adjoining Parcels	<p>1922-2018</p> <p>The subject and adjoining parcels are depicted with consistent topography throughout the years. The 168 North Main Street parcel, located to the north of the subject property, is located at an elevation approximately 40 feet higher than the subject property.</p>
SITE RECONNAISSANCE	
Inspection Date	October 11, 2022.
Access restrictions	No access restrictions.
Petroleum Products and Hazardous Substances	None observed at the property.
Aboveground and Underground Storage Tanks	None observed at the property.
Drums	None observed at the property.
Solid Waste Disposal	Portions of concrete building foundations, tires, lengths of piping, fragments of finished granite, and piles of concrete were observed on the property.
Odors	No odors were notable at the property.
Stained Ground Surfaces and Stressed Vegetation	No evidence of staining or stressed vegetation were observed at the property.
Wells	No wells were observed at the property. Several monitoring wells were observed at the nearby 73 North Main Street property. Environmental concerns associated with this property were described in previous sections of this report.
Floor Drains & Wastewater Management	<p><u>Floor Drains and Sumps:</u> None observed at the property. A rectangular cut in the concrete foundation was observed with piping running through it. It is unclear what this structure once was.</p> <p><u>Domestic Wastewater:</u> According to property owner Nick Cetrangolo, the property was likely connected to the municipal system, but he could not confirm. A Phase I ESA conducted on the abutting 108 North Main Street property indicates former buildings at that property were connected to the municipal sewer system.</p> <p><u>Drywells:</u> No apparent dry wells were observed on the property.</p> <p><u>Stormwater:</u> One catch basin was observed on the property and several additional catch basins were observed along North Main Street. An apparent stormwater treatment system was identified on the 108 North Main Street property along the northern property line shared with the subject property. No additional information on the system was identified in available online resources.</p>
Septic Systems	None observed at the property.
Potable Water	Municipal drinking water is available in this area of Northfield.

SUMMARY OF FINDINGS

SITE RECONNAISSANCE	
Transformers and PCB-Containing Equipment	None observed at the property. Pole-mounted transformers are located on the adjacent 108 North Main Street and 127 North Main Street properties.
Spills and Other Conditions	No evidence of spills or leaks was noted at the time of the inspection.
Pits, Ponds, or Lagoons	None observed on the property.
Vapor Intrusion	A vapor encroachment condition (VEC) cannot be ruled out without an evaluation of soil and groundwater conditions at the site.

INTERVIEWS	
Information from the following interview sources has been incorporated throughout this report.	
Owners	Nick Cetrangolo, property owner. See Appendix F for Interview Record and other resources incorporated throughout this report.
Occupant	None. Property is currently unoccupied.
Municipal Sources	Town of Northfield Town Offices, Land Records Research, and Fire Department.

NON-SCOPE CONSIDERATIONS	
Asbestos	This assessment did not include a hazardous materials survey. If demolition of the existing structures is planned, a hazardous materials survey is recommended.
Radon	Moderate radon potential (2 to 4 picocuries/liter). <i>Source:</i> US Environmental Protection Agency
Lead-based Paint	This assessment did not include a hazardous materials survey. Existing structures do not appear to have been painted; therefore, a lead-based paint survey is not applicable.
Wetlands	Dog River bounds the property to the east. Wetlands associated with Dog River appear to be located on residential properties on the east side of the river.
Regulatory Compliance	Not evaluated.
Indoor Air Quality	The subject property is not developed with a building; therefore, assessment of indoor air quality is not applicable.
Mold	This assessment did not include a mold survey.
Per- and Polyfluoroalkyl Substances (PFAS)	Not evaluated. No evidence of current/historical use or storage of PFAS was identified during this assessment.

SUMMARY OF FINDINGS

SUMMARY OF RECOGNIZED ENVIRONMENTAL CONDITIONS	
Map Key 1 <input checked="" type="checkbox"/> REC <input type="checkbox"/> HREC <input type="checkbox"/> CREC <input type="checkbox"/> <i>De minimis condition</i> <input type="checkbox"/> Other	<p><u>Historical underground storage and documented release of petroleum at an adjacent property.</u> An undocumented 500-gallon No. 2 fuel oil UST was encountered during excavation on the northern portion of the existing Dollar General property at 108 North Main Street on October 24, 2012. The UST was inadvertently damaged during excavation and approximately 100 gallons of oily water were released to the subsurface. The VTDEC assigned Spill #2012WMD529 to the release condition. Response actions implemented to address the release of No. 2 heating oil included removal of the UST, recovery of oily water from the excavation, excavation and offsite disposal of impacted soil, and post-excavation soil sampling and analysis. Post-excavation soil sampling did not identify contaminant concentrations exceeding applicable standards. The damaged UST contents were reported to have impacted groundwater; however, groundwater sampling was not performed as part of or following UST closure activities. The VTDEC Spill Project was closed on December 12, 2012. Based on the regulatory status of the Spill Project, this finding would typically be considered an HREC; however, based on the absence of post-release groundwater analytical data and the location of the release area, immediately adjacent to the subject property, this finding is considered a REC.</p>
Map Key 2 <input checked="" type="checkbox"/> REC <input type="checkbox"/> HREC <input type="checkbox"/> CREC <input type="checkbox"/> <i>De minimis condition</i> <input type="checkbox"/> Other	<p><u>Historical underground storage of petroleum at an undocumented location on the subject or adjacent property.</u> The 11 North Main Street property is identified as UST Facility ID 4855711 for one 10,000-gallon UST containing No. 2 or No. 4 fuel oil that was removed in 1998. At this time, the subject parcel and southerly abutting parcel (108 North Main Street) were both identified as 11 North Main Street. No records documenting the location of the former 10,000-gallon UST or an associated UST closure assessment were identified; therefore, the UST may have been located on the subject parcel or on the adjacent 108 North Main Street parcel. The historical underground storage of petroleum at an undocumented location on the subject property or adjacent property is considered a REC.</p>
Map Key 3 <input checked="" type="checkbox"/> REC <input type="checkbox"/> HREC <input type="checkbox"/> CREC <input type="checkbox"/> <i>De minimis condition</i> <input type="checkbox"/> Other	<p><u>Documented arsenic contamination at an adjacent property.</u> Elevated concentrations of arsenic were detected in soil at the adjacent 108 North Main Street property during investigation performed in 2011. VTDEC assigned Site #2012-4284 to the release condition. During redevelopment of the property, shallow arsenic-impacted soil was buried under five feet of clean fill at the property in accordance with a VTDEC-approved Corrective Action Plan (CAP). Following implementation of the CAP, VTDEC indicated that the site would be eligible for Site Management Activity Completed (SMAC) designation following completion of monitoring well abandonment and recordation of a notice on the land record for the property. No records documenting completion of the well abandonment, recordation of the notice, or formal SMAC designation were identified during this assessment. The horizontal extent of arsenic contamination on the adjacent parcel was not fully defined and soil conditions on the subject parcel were not evaluated; therefore, the documented presence of arsenic contamination on the adjacent property is considered a REC.</p>

SUMMARY OF FINDINGS

SUMMARY OF RECOGNIZED ENVIRONMENTAL CONDITIONS	
Map Key 4 <input type="checkbox"/> REC <input type="checkbox"/> HREC <input type="checkbox"/> CREC <input type="checkbox"/> <i>De minimis condition</i> <input checked="" type="checkbox"/> Other	<p><u>Release of diesel fuel to asphalt pavement at an adjacent property.</u> According to files on the VTDEC online database, a release of approximately 10 gallons of diesel fuel occurred at the 108 North Main Street property on September 5, 2020. The diesel was released from a vehicle to a limited area of asphalt pavement. VTDEC assigned Spill #2020WMD393 to the release condition. Response actions included deployment and recovery of absorbent materials to the impacted asphalt. No environmental media was impacted by the release. The spill project was closed on September 16, 2020. This finding is considered an “other environmental concern” and does not pose a threat to the subject property.</p>

QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

Environmental Professionals

The following Wilcox & Barton, Inc. personnel are qualified as Environmental Professionals in accordance with 40 CFR 312 through a qualifying combination of licensure, education, and experience. These individuals have been authorized by executive management to perform All Appropriate Inquiry investigations in compliance with the standard and with corporate quality requirements.

William R. Wilcox, Jr., Co-Founder, President - Principal Geologist

As co-founder and President of the firm, Bill's sole focus is on solving our clients' environmental, geotechnical, and engineering challenges through the delivery of value. He is dedicated to responsiveness, quality, optimal use of client resources, and being accessible at all times. Over the course of 25 years as a hands-on business leader, Bill has managed and directed hundreds of environmental assessment, investigation, remediation, and compliance projects. He holds a degree in Natural Science from Castleton State College.

Russell W. Barton, Co-Founder, Senior Vice President - Principal Geologist

Russ manages company resources and oversees day-to-day operations to ensure client needs and objectives are met. Russ is the face of the business in the areas of oil services and petroleum cleanup. He has almost 25 years' experience in the environmental consulting industry, maintaining expertise in site assessment; investigation and remediation of hazardous materials, both indoors and in the ground; underground storage tank design, installation, and management; and environmental construction. He is a trusted ally and is often called upon to solve difficult regulatory and technical problems for his diverse clientele. Russ received his Bachelor of Arts degree in Natural Science from Castleton State College.

Robert W. Rooks, PE, Senior Vice President - Principal Engineer

Bob oversees the technical execution of all work to ensure accuracy and defensibility, bringing his ruthless focus on quality to all the firm's work product. He has a diverse engineering background, spanning 28 years, and maintains expertise in all of the company's service areas. Bob leads our technical workforce of engineers, geologists, and scientists in the execution of excellent work to meet client and regulatory expectations. He holds bachelor's and master's degrees in Civil and Environmental Engineering from Duke University and is a licensed Professional Engineer in all New England states plus New York, Florida, and Hawaii.

Amy A. Roth, PG, LSP, Vice President

Amy leads our consulting practice in Massachusetts, directing multi-discipline scientific teams in the delivery of high-value client solutions. She drives project schedules and budgets with passion. She is accessible and responsive and resolves environmental matters with clients' objectives foremost in mind. Amy specializes in property transactions, redevelopment, indoor air, and the investigation and remediation of oil and hazardous materials subject to MGL Chapter 21 E and the Massachusetts Contingency Plan. She is an active member of the Licensed Site Professional Association and works regularly with industry leaders and regulators. She received her master's degree in Geology/Geochemistry from Washington University in St. Louis.

Environmental Professionals

John DeMille, Senior Project Geologist

John serves our clients as a hands-on Project Manager. He streamlines projects, manages with precision, and saves clients' money through his meticulous attention to detail. He has a precise and comprehensive understanding of state and federal regulations, allowing him to design cost-effective investigatory and remedial work scopes. John specializes in due diligence assessments, including Phase I and Phase II Environmental Site Assessments, building-related hazardous materials surveys, and geotechnical evaluations to drive important business decisions associated with property acquisition. He received his Bachelor of Science degree in Geology from Bridgewater State University.

Paul Plagge, EIT, Senior Engineer

Paul is a Senior Project Manager, technical lead for all Wilcox & Barton, Inc. hazardous materials projects, and trusted advisor for the company's environmental and civil work. With more than 25 years' experience, Paul has completed massive multimillion dollar projects with multi-disciplined design teams from Florida to Maine. He is a licensed Asbestos Inspector and Project Designer in seven states. He has guided and executed ASTM Phase I and Phase II Environmental Site Assessments in support of real estate transactions as well as preliminary and comprehensive response actions pursuant to the *Massachusetts Contingency Plan*. Paul has designed and supervised the installation of remediation systems, sewer connection/extensions, storm water conveyance systems, Title V septic systems, floor drains and oil/water separators, and the installation and removal of underground storage tank and aboveground storage tank systems. He received a Bachelor of Science degree in Civil Engineering from the University of Massachusetts Amherst.

Barrett L Smith, CPG, LEP – Senior Hydrogeologist

Barrett is a seasoned Project Manager with over 20 years of consulting experience. Clients praise him for clearly identifying risks, providing high value solutions and navigating complicated regulatory frameworks with ease. He excels at evaluating and supporting redevelopment of sites with long and complex histories. Because of his affable personality and excellent communication skills, he works well with clients, team members, regulators and other stake holders to successfully complete projects. Barrett is a Certified Professional Geologist and a Licensed Environmental Professional in Connecticut. He received his Bachelor of Arts degree in Geology-Biology from Colby College and his master's degree in Geology from the University of Maryland.

Alan J. McLevy, PE, CPESC, Senior Engineer

As a technical leader, client manager, and Professional Engineer in Massachusetts, New Hampshire, and Connecticut, Alan is a senior member of the technical team and is responsible for technical, budgetary, and schedule management of many of the firm's more complex projects, including spill prevention planning, construction monitoring, and compliance with petroleum storage and fire protection requirements. With more than 15 years' experience, Alan also leads technical teams in the execution of site assessments, remedial design, and risk-based site closure, guiding clients through the intricacies of varying and ever-changing state and federal environmental regulations. As a Certified Professional in Erosion and Sediment Control (CPESC), Alan leads our stormwater monitoring and permitting practice at construction and development projects throughout New England. He holds a bachelor's degree in Environmental Engineering from Roger Williams University.

Chris Montoya, Project Geologist

As a technical leader, Chris Montoya is a Project Geologist responsible for the performance of Phase I Environmental Site Assessments, subsurface investigations, hazardous materials inspections, soil excavation oversight, sub-slab depressurization system design and operation, underground storage tank closure, soil and groundwater remediation, data analysis, and report writing. Chris has a genial personality and has been known to do whatever it takes to finish a project, including working nights and weekends to get the job done. He is a Licensed Asbestos Inspector. He earned his BS in Earth Sciences and graduated Magna Cum Laude from Bridgewater State University.

Environmental Professionals

Brian P. Campelia, PE, Senior Engineer

As a technical leader, client manager, and Professional Engineer in New Hampshire, Brian is responsible for technical, budgetary, and schedule management of projects including subsurface investigations and soil and groundwater remediation. He holds a master's degree in Environmental Engineering from the University of New Hampshire.

Patrick J. Massicotte, PE, Senior Engineer

Patrick is a Senior Project Manager responsible for the technical, budgetary, and scheduling aspects of numerous environmental investigation and remediation projects. He is very familiar with New Hampshire and Massachusetts environmental regulations and the New Hampshire Petroleum Reimbursement Fund Program. Patrick embraces a challenge and enjoys leading clients through the various environmental requirements to reach compliance goals and solutions. Patrick holds a bachelor's degree in Civil Engineering from the University of New Hampshire and is a registered Professional Engineer in New Hampshire.

Madeleine B. Arold, EIT, Project Engineer

Madeleine is a Project Engineer responsible for the performance of Phase I Environmental Site Assessments, subsurface investigations, soil excavation oversight, underground storage tank closure, soil and groundwater remediation, data analysis, and report writing. She manages investigation and remediation sites in New Hampshire regularly coordinating with NHDES, clients, and field staff. Madeleine is a driven individual and enjoys collaborating with others to find the best possible solution for every project. She holds a bachelor's degree in Environmental Engineering and graduated Magna Cum Laude from the University of Georgia.

ATTACHMENT B

SCOPE OF WORK

SCOPE OF WORK

1.0 INTRODUCTION

This report presents findings and potential environmental conditions associated with the referenced parcel. This Phase I Environmental Site Assessment (Phase I ESA) was completed in accordance with the American Society for Testing and Materials (ASTM) Standard E 1527-21, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*, as approved November 1, 2013, by ASTM Committee E-50. This standard was originally approved in 1993 and revised in 2005 as E1527-05, in 2013 as E1527-13, and again in 2021 in its current form. The methodology meets the standard for “all appropriate inquiry” necessary to invoke landowner liability protections afforded under the Comprehensive Environmental Response Compensation and Liabilities Act, as amended by the Superfund Amendments and Reauthorization Act of 1986, and the Small Business Liability Relief and Brownfields Revitalization Act of 2002.

1.1 Purpose

The purpose of the Phase I ESA was:

1. To identify and evaluate the actual and potential environmental risks associated with the site; and
2. To evidence that the User has made “all appropriate inquiry” regarding environmental conditions at the site.

The objective of the Phase I ESA is to identify recognized environmental conditions (RECs). The term *recognized environmental condition* means the presence or likely presence of any hazardous substance or petroleum products in, on, or at a property:

1. Due to any release to the environment;
2. Under conditions indicative of a release to the environment; or
3. Under conditions that pose a material threat of a future release to the environment.

An *historical recognized environmental condition* (HREC) is defined as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and that has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted residential use criteria...without subjecting the property to any required controls.

A *controlled recognized environmental condition* (CREC) is a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

RECs can include the presence of such materials even under conditions that comply with applicable laws and regulations. *De minimis* conditions are not RECs.

Some conditions present a potential environmental concern, but do not meet the definition of REC as provided in the ASTM Standard. These conditions, if identified, are reported as “other environmental concerns” so that they come to the attention of the User. Further investigation or evaluation is left to the discretion of the User based on the available information and risk tolerance.

This assessment is intended for the use of the User and its assigns for the purposes defined in this section.

1.2 Scope of Services

The scope of services includes the completion of a Phase I ESA in accordance with ASTM Standard E 1527-21.

1.3 Significant Assumptions

This assessment was completed under the assumption that a residential building will be constructed on the subject property. Wilcox & Barton, Inc. has assumed historical records and documents to be factual and accurate regarding historical information and conditions that were present at the time those documents were created.

1.4 Limiting Conditions, Deviations, and Exceptions

This site assessment is based on the conditions existing at the property during the site visit. Past conditions are considered on the basis of readily available records, previous reports, interviews, and recollections. Site conditions are subject to variations and changes over time.

This report is based on current, fully implemented, environmental regulations. Future regulatory modifications and agency interpretations may affect the environmental status of the property. The assessment has been completed without substantial deviations or exceptions from the protocols specified in ASTM Standard E 1527-21.

This Phase I ESA is limited in scope to the activities, methods, and levels of diligence prescribed by the ASTM Standard. While the findings documented herein are based upon the best professional judgment of appropriately qualified and experienced environmental professionals, no environmental site assessment can wholly eliminate uncertainty regarding the potential for RECs.

Wilcox & Barton, Inc. has made reasonable attempts to collect and validate the information presented in this report. Further, we have presumed the information to be valid and accurate unless conflicting sources were identified. Where information upon which we have relied is shown to be invalid, inaccurate, or incomplete, our conclusions and recommendations may not be valid. Wilcox & Barton, Inc. reserves the right to modify its conclusions upon receipt of notice regarding new or previously inaccurate information.

1.5 Special Terms and Conditions

Special terms or conditions different from the protocols of ASTM E 1527-21 were not requested, except as indicated.

1.6 User Reliance

This report was prepared for the sole benefit of the indicated User and its assigns, lenders, and development partners, who may rely on the accuracy of the information presented, as well as the findings, conclusions, and recommendations, for the purposes established in Section 1.1 of the report. This report may not be relied upon by any other person or entity, either in part or in its entirety, without prior written authorization of Wilcox & Barton, Inc. In accordance with Section 4.6 of the ASTM Standard of Practice, this environmental assessment may be presumed valid for a period of up to 180 days from the date upon which the earliest component of the Phase I was completed.

2.0 USER PROVIDED INFORMATION

2.1 Recorded Land Title Records

Ownership information was obtained from available records at the local assessor, lister, or tax clerk office. The information presented is limited to that which was readily available in the public records. It should not be construed or interpreted as a formal title search. A formal title search was not performed as part of this Phase I ESA.

2.2 Valuation Reduction for Environmental Issues

Based on information known to Wilcox & Barton, Inc. and information found in the public record, there are no known environmental liens, encumbrances, or other environmentally based restrictions on use of the property. Neither the User nor Wilcox & Barton, Inc. has any specific knowledge of any valuation reductions, either in the past or in the future, on the basis of environmental issues.

2.3 Reason for Performing Phase I Assessment

This assessment has been prepared to provide information regarding potential environmental conditions at the property in support of a real estate transaction.

2.4 Commonly Known or Reasonably Ascertainable Information

No additional information was provided by the User.

3.0 RECORDS REVIEW

3.1 Standard Environmental Records

Wilcox & Barton, Inc. contracted Environmental Data Resources, Inc. (EDR) to conduct an environmental database search for the subject property and surrounding areas in accordance with ASTM E 1527-21. A copy of the Radius Report generated by EDR is provided in Attachment E.

3.2 Additional Record Sources

Wilcox & Barton, Inc. also reviewed files on applicable state database, files at the relevant municipal offices, and historical aerial photographs, Sanborn Fire Insurance Maps, city directories, and topographic maps for the subject and adjacent properties. The information provided by these sources was considered in the summary of findings for the site.

3.3 Historical Use Information on the Property

Historical records including: aerial photographs, Sanborn Fire Insurance Maps, city directories, and topographic maps were reviewed to determine historical uses of the subject property. The historical documents are included in Attachment E.

3.4 Historical Use of Adjoining Properties

Information regarding the historical use of adjoining properties is based upon review of the EDR report, historical aerial photographs, Sanborn Fire Insurance Maps, city directories, topographic maps, and other historical documents. In general, adjoining properties have historically been a mixture of residential and commercial properties.

4.0 SITE RECONNAISSANCE

Photographs documenting the site inspection are presented in Attachment C and convey the general condition of the property and abutters at the time of inspection.

4.1 Limiting Conditions and Methodologies Used

Wilcox & Barton, Inc. performed the site reconnaissance in accordance with ASTM Standard E 1527-21. During the reconnaissance, Wilcox & Barton, Inc. personnel physically walked accessible portions of the subject property and along the property boundaries.

The objective of the methodology employed for this assessment was to minimize, to the extent reasonably possible, the potential for later discovery of environmental conditions not described herein. While Wilcox & Barton, Inc. believes this objective has been achieved, no site assessment can wholly eliminate uncertainty regarding the potential for environmental conditions, and no guarantees, either expressed or implied, are intended by the preparation of this report.

5.0 INTERVIEWS

Wilcox & Barton, Inc. contacted the sources indicated. Information gathered from each of the sources is incorporated throughout the Summary of Findings.

6.0 EVALUATION

Recognized Environmental Conditions, Historical Environmental Conditions, Controlled Environmental Conditions, and *De minimis* Conditions are listed in the Summary of Findings.

Any potential sources of contamination, or other conditions meeting the ASTM definition, are considered RECs and may imply future consulting and/or legal costs for the owner of the subject parcel if a release is later detected.

6.1 Non-Scope Considerations

Factors outside the scope of the ASTM standard of practice can have a material environmental impact on the current or planned use of a property. Readily available information for common non-scope items is presented in the Summary of Findings. However, comprehensive surveys and evaluations for non-scope considerations were not performed unless specifically requested.

6.2 Opinion

The opinions expressed in this report are based on information provided by visual inspections of the subject property, interviews with public officials, and reviews of documents available in public agency files. The information provided or obtained in these ways was accepted as-is and not independently verified, unless there were reasons to question its validity. Should any additional information become available of a relevant public health or environmental nature, Wilcox & Barton, Inc. would request access to it and the opportunity to comment on it, reserving the right to reevaluate and amend any opinions made in this report.

6.3 Data Gaps

Data gaps, and the expected effects on the findings presented herein, are presented in the Summary of Findings.

6.4 References and Information Sources

References and information sources used during this study are listed in the Summary of Findings.

Northfield, Vermont
SPAN: 441-139-10312

Photo 9: View of car tires observed across the surface of the subject property.

Photo 10: Asphalt-paved parking area associated with the adjacent Dollar General property.

Photo 11: View of Dog River from the northern edge of the subject property (approximately 20-foot elevation difference).

Photo 12: Fragments of finished granite observed along the bank of Dog River on the eastern edge of the subject property.

Photographs
11 North Main Street
Northfield, Vermont
SPAN: 441-139-10312

Photo 13: View of car tires and litter within the Dog River located on the eastern edge of the subject property.

Photo 15: View of utility manhole associated with a stormwater treatment system on the adjacent Dollar General property to the south.

Photo 14: View of the southern edge of subject property, looking east.

Photo 16: View of North Main Street, looking north. The western edge of the subject property is depicted beyond the Dollar General property.

ATTACHMENT D
USER QUESTIONNAIRE

ASTM E 1527-21 User Questionnaire

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfield Revitalization Act of 2001, the user must provide the following information to the environmental professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

Property: 11 North Main Street (SPAN: 441-139-10312)
Northfield, Vermont

1. Environmental cleanup liens filed or recorded against the site (40 CFR 312.25).

Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?

NO

2. Activity and land use limitations that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).

Are you aware of any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

NO

3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

NO

4. Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).

Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

Yes - WE PAID FMV. IF CONTAMINANTS ARE
FOUND SALE PRICE TO BE RENEGOTIATED

5. Commonly known or reasonably ascertainable information about the property (40 CFR 312.30)

Are you aware of commonly known or reasonable ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user,

- (a.) Do you know of past uses of the property? *Gunnite works*
- (b.) Do you know of specific chemicals that are present or once were present at the property? *NO*
- (c.) Do you know of any spills or other chemical releases that have taken place at the property? *NO*
- (d.) Do you know of any environmental cleanups that have taken place at the property?

NO

6. The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property? *NO*

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Wilcox & Barton, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/26/2022 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are

EXECUTIVE SUMMARY

4 RCRA-VSQQ sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

VT SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Vermont Hazardous Waste Sites List.

A review of the VT SHWS list, as provided by EDR, and dated 05/18/2022 has revealed that there are 11 VT SHWS sites within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
DOLLAR GENERAL STORE Facility ID: 20124284 Contamination: Arsenic Project Status:: Phase I conducted in May 2011; Phase II conducted in September 2011. Property is being redeveloped. Elevated arsenic was found in soil. A Corrective Action Plan was developed to address contamination during and after construction. During construction in late October two abandoned USTs were found.	108 NORTH MAIN ST	WNW 0 - 1/8 (0.002 mi.)	A4	12
NORTHFIELD SAVINGS B Facility ID: 20174696 Contamination: PAH Project Status:: Phase I conducted Sept 2016. RECs - historic uses of the property for auto repair, machining, steam laundry, and retail gasoline. Redevelopment planned for Northfield Savings Bank. Phase II report submitted Feb 2017. Results indicated coal ash present on site within upper five feet of soil, PAHs, arsenic, and lead exceeding residential and industrial standards. Draft CAP submitted June 2017. CAP approved Sept 2017. CAP Completion report received October 2018. SMAC letter updated and in draft phase.	33 NORTH MAIN STREET	SW 0 - 1/8 (0.070 mi.)	D20	69
DROWN PROPERTY Facility ID: 20134371 Project Status:: PAHs and arsenic in excess of SSVs identified during limited Phase II activities. Other RECs identified during Phase I ESA still need investigation. In contact with RP. Revised work plan received May 2018. Report received August 2018, comments submitted 11/2018. Revised report received 12/2018. Submitted additional DEC comments and received second revision May 2019. Submitted third DEC comments June 2019 and received fourth revision July 2019. Justification for site closure submitted April 2021; Well Abandonment report and SMAC request submitted July 2021. SMAC letter in draft.	11 WALL STREET	SSW 1/8 - 1/4 (0.140 mi.)	E34	86

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 4 EDR Hist Auto sites within approximately 0.125 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

Comments: Hebert Excavating hit tank while excavating on property. 100+/- gallons of oily water spilled. EP+S will be at location on 10/25/2012 to cut/clean tank. ATC will perform site assessment.
Action: Released liquid recovered using vac truck. 500-gal HO and 40-gal hydraulic oil USTs removed on 10/25/12. 20 cu yds of PCS excavated and confirmatory samples at extent of excavation determined low level impacts below standards. No further work required related to the UST removals.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Product: Not reported
Quantity: 10 Gallons
Unit Of Measure: Not reported
Responsible Party: Dollar General Store
RP Address: Not reported
RP City,St,Zip: Not reported
RP Phone Work: Not reported
RP Phone Home: Not reported
RP EMail: Not reported
EMail Sent Status: Not reported
Case Assigned To: Not reported
Surface Water Affected: Not reported
Date Closed: 09/16/2020
Closure Desc: Not reported
UST Facility Id: Not reported
Lat/Long: Not reported
Comments: Due to an unspecified cause, the responsible party's trailer's refer tank spilled an estimate ten (10) gallons of diesel fuel onto the loading area parking lot asphalt and existing curbside sediment.
Action: DG contacted MEG to respond. MEG personnel applied three (3) bags of granular absorbents onto the diesel-impacted asphalt, which was then swept into one (1) 55-gallon drum and then labeled and staged on site until profiling enabled approval for transport for disposal. All impacted material removed.

Tank ID: 1194
Tank Status: PULLED
Tank Label: 1989-3-R
Tank Protect: Protected steel
Year Removed: 2001
Capacity (Gal): 6800
Category One: UST
CP Test: 6/1/2000 12:00:00 AM
Release Monitor: ITM
Condition: GOOD
Date Reference: N/A

Compartment:

Comp Id: 1193
Compartment Label: A
Substance: Gasoline
Spill: Spill Containment Bucket
Overfill: Overfill Ball Float Vent

Piping:

Pipe Seq: 1
Pipe Type: DEFAULT
Pipe Installation Year: 1989
Pipe Protection: Protected steel
CP Pipe Test: Not reported
Pipe Monitor 1: Exempt Suction System w/Vertical Check Valve
Pipe Monitor 1 Test: Not reported
Pipe Monitor 2: Not reported
Pipe Monitor 2 Tested Date: Not reported

Site Status: Voluntary Action
Contamination: Gasoline
Institutional Control: Not reported
Record Last Update: 01/26/2021
Project Status: Petroleum contamination discovered in tank sump which had originated from a leak in flexible piping. Full extent of contamination could not be determined due to presence of UST. ISI found low levels of VOCs in source area. Elevated lead concentrations were found across the site. New release discovered during UST removal on 9/2015

LAST:
Name: GILLESPIE FUELS
Address: 141 WALL ST
City,State,Zip: NORTHFIELD, VT
Facility ID: 20012880
Source: Above Ground Storage Tank
Priority: SMAC - Site Management Activities Completed
Staff: Tami Wuestenberg
Date of Closure: 09/29/2010
Source: Above Ground Storage Tank
Site Use: Business
site Status: Voluntary Action
Contamination: Diesel, Heating Oil, Kerosene, Other SVOCs, PAH
Institutional Control: Land Record Notice
Record Last Update: 06/09/2015
Project Status: Above ground fuel oil tank failure April 2001. November 2002 report indicates presence of soil contamination. October 2008 groundwater monitoring report indicates residual groundwater contamination (below GWES) remains. Stockpiled soils have been removed from the site. Annual groundwater monitoring scheduled, next event June 2009. Site SMACd with notice to land records; slight benzene exceedence in one gw well.

Name: STODDARD ENTERPRISES INCORP.
Address: 173 WALL STREET
City,State,Zip: NORTHFIELD, VT
Facility ID: 770062
Source Type: Manufacturing
Priority: SMAC - Site Management Activities Completed
Staff: Tami Wuestenberg
Closure Date: 09/29/2010
Site Use: Business
site Status: Voluntary Action
Contamination: Dioxin, Other SVOCs, PAH
Institutional Control: Land Record Notice
Record Last Update: 05/18/2021
Project Status: EPA NFRAP Sept 98, Phase II reviewed, additional investigation report under review. Potential purchaser may do further investigation, expecting workplan fall 2005. Site was purchased without due diligence. New owner performing SI. Report received November 2009. Requested additional information, which received in February 2010. Currently under review. Low levels of dioxin and PAHs in soils sampled under paved parking lot. Industrial uses, SMACd site with Notice to Land Records stating that additional work may be necessary before changing land use or doing any improvements on the property.

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 05/08/2022
Date Data Arrived at EDR: 05/09/2022
Date Made Active in Reports: 07/28/2022
Number of Days to Update: 80

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Child Care Providers

Source: Social & Rehabilitation Services

UTM Y (Meters):	4891040.0
Elevation:	713 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	11736227 NORTHFIELD, VT
Version Date:	2018

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>

50023C0418E	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
BARRE NW	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Machias

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 61 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	7 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141.1111 Min: 42.3333	Max: 6 Min: 4.5
2	7 inches	22 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141.1111 Min: 42.3333	Max: 6 Min: 4.5
3	22 inches	64 inches	very gravelly sand	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141.1111 Min: 42.3333	Max: 6 Min: 4.5

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: Adams

Soil Surface Texture: loamy fine sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	7 inches	loamy fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 705 Min: 141.1111	Max: 6 Min: 4.5
2	7 inches	30 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 705 Min: 141.1111	Max: 6 Min: 4.5
3	30 inches	64 inches	coarse sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 705 Min: 141.1111	Max: 6 Min: 4.5

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 3

Soil Component Name: Water

Soil Surface Texture: loamy fine sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 4

Soil Component Name: Nicholville

Soil Surface Texture: silt loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 54 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	7 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14.1111 Min: 4.2333	Max: 6 Min: 4.5

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
2	7 inches	14 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14.1111 Min: 4.2333	Max: 6 Min: 4.5
3	14 inches	64 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14.1111 Min: 4.2333	Max: 6 Min: 4.5

Soil Map ID: 5

Soil Component Name: Salmon

Soil Surface Texture: slightly decomposed plant material

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Map ID: 10

Soil Component Name: Glover

Soil Surface Texture: slightly decomposed plant material

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Somewhat excessively drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 44 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: VT Center for Geographic Information

Telephone: 802-882-3001

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

INTERVIEW RECORD

Project No.: MCLN0001	Site Name/Address: 11 North Main Street, Northfield, VT	
Interview with: Nick Cetrangolo	Organization/Role: Current property owner	
Interview by: M. Arold	Date: 10/13/2022	Time: 15:00
Conducted via: <input checked="" type="checkbox"/> Phone <input type="checkbox"/> In-person <input type="checkbox"/> Email exchange (attach) <input type="checkbox"/> Other		
<p>Summary of Conversation:</p> <p>Mr. Nick Cetrangolo recalls buying the property circa 1956 from Mr. Gaylord at the Northfield Savings Bank. He states that Cross Bros occupied the subject property prior to himself purchasing the property. He states that they owned all the way from the “embankment” (steep outcrop along the northern subject property line) and south to the dam (meaning the 11 North Main Street and 108 North Main Street parcels). When Nick bought the property circa to 1956, they redeveloped it as a combined machine shop/auto repair/filling station and he recalls the building was heated with wood. Nick stated that the “auto repair” reference to the building is a stretch and that it was more so a convenience store associated with the filling station than an auto repair shop; however, he did describe that they would use small quantities of oil for machinery operations and maintenance. He recalled that they did not use harsh chemicals other than oil there. For a while the machine shop operated under the name of “P&H” and thinks the gasoline filling station was probably a Sunoco.</p> <p>When asked about any environmental issues that he could recall about the property, he mentions that he was present during closure of a large heating oil tank that was located “under where the dollar general is, near the river.” He remembers the environmental assessment looked okay. When I asked about the status of the gasoline tanks on the subject property, he recalls they were all removed and disposed of offsite. Nick recalls his business lasting from 1956 until around 2000.</p> <p>When the most recent building existed on the subject property, he cannot recall if they were connected to the municipal sewer or private septic but doesn’t think it would’ve been possible to have private septic on that parcel since it was so small and had up to 200 employees at one point in time. They used hydro power to rotate turbines for some processes associated with granite manufacturing.</p> <p>Subject evaluation of source credibility/degree of knowledge: Mr. Cetrangolo is 91 years old but can still remember minute details of his time in Northfield such as the name of the banker who sold him the property.</p>		

INTERVIEW RECORD

Project No.: MCLN0001	Site Name/Address: 11 North Main Street, Northfield, VT	
Interview with: Office of Kim Pedley, Town Clerk	Organization/Role: Northfield Town Clerk's office/employee	
Interview by: M. Arold	Date: 10/19/2022	Time: 10:03
Conducted via: <input checked="" type="checkbox"/> Phone <input type="checkbox"/> In-person <input type="checkbox"/> Email exchange (attach) <input type="checkbox"/> Other		
<p>Summary of Conversation:</p> <p>I called the Town Clerk's office to determine if there was a time when street addresses changed along North Main Street. The employee confirmed that sometime in the early 2000s that addresses were updated in support of 911/emergency response property identification purposes.</p> <p>I gave her an example of Baroffio's Garage (registered UST facility and EDR historical garage at 77 North Main Street) and asked if she could determine if that business ever operated across North Main Street from the current Dollar General property. She discussed with her peers (address change occurred before she was employed there) and confirmed it did not.</p>		
Subject evaluation of source credibility/degree of knowledge: The Town Clerk's Office remembered collectively the address changes and seems to be a credible information source.		

VERMONT UNDERGROUND STORAGE TANK (UST) REMOVAL FORM

This form can only be used when all registered USTs have been removed from the facility.

In compliance with UST Regulations, the registered UST recorded in Book 82 Page 124 in the Town of Northfield Land Records was removed from the ground on September 21, 1998.

Northfield Town History

From 1785 through the 1820s, largely Yankees from Connecticut, Massachusetts, and the older Vermont towns settled Northfield. Next to arrive were the Irish, attracted in the 1840's by jobs on the railroad. The Welsh arrived after the Irish to work in the slate quarries in the 1850's and 1860's. Stonework also brought the next wave. Starting about 1890, Italians, Spaniards, and Scots joined the workforce in the granite sheds. From the 1880's onward, Canadians of French descent came seeking opportunity, many buying up hill farms abandoned in the decades after the Civil War.

The years from 1785 to 1825 saw the development of Northfield's four villages. The first settlement was on East Hill (now Mill Hill), close by Elijah Paine's grist and sawmills. As the population grew, boundaries crept up the hill and northward along Route 12. Clusters of houses became villages, each with its own personality and name: South Village, Center Village, Factory Village, and the Falls.

First to have a distinct identity was South Village, which had numerous small businesses and manufacturing operations through the nineteenth century. Next was Center Village, where the first post office, town clerk's office, and churches were established, and which for many years was the social and political center of town. After the Center came Factory Village (the present Village of Northfield) named for the woolen mill located there. Last to develop was Northfield Falls, and by the late 1820's it, too, was a thriving community.

With the arrival of the railroad in the 1840's, Factory Village and Depot Square increasingly became the hub of local activity. Residents there began to demand lighted streets, sidewalks, fire and police protection, and they then petitioned the legislature to establish a separate Village of Northfield. The Village of Northfield was incorporated November 14, 1855.

Over the next fifty years, village residents voted taxes on themselves for a variety of services. Sidewalks were laid down, the water department was established and the first electric plant was built (both in 1895), and the first sewer lines were laid (1901-1904). Around 1900 the police department was set up, and the two independent fire companies, which existed from the 1860's, came under village control.

The price of such amenities was high; consequently, as they were increasingly needed outside the village, police, and fire services were taken over by the town. The town and village highway departments were supported by taxes levied separately on the grand lists of the village and town.

Once settlements were established, people turned their attention to making a living. Of necessity, almost everyone was a farmer first, and most lived by barter (goods and services were paid for with other goods and services). Eventually people needed hard cash, and it was this quest for individual and collective economic security that has been the paramount concern in Northfield for two centuries.

Until about 1814, residents made potash on their farms and sent it to mills in America and abroad which used it for everything from finishing wool cloth to making glass. About 1812, as the demand for potash was waning, Elijah Paine built a huge woolen mill on the site of the now closed Cetrangolo Finishing works (which closed in 1999). Paine's woolen mill employed between 175 and 200 workers and was for years the town's largest employer.

When wool prices declined in the 1840's, Elijah Paine's son Charles came to the rescue. As President of the Vermont Central Railroad, Charles Paine pushed the line from Windsor, Vermont to Burlington, finishing construction on the last day of 1849, and locating the railroad's headquarters in Northfield. For fifteen years the Vermont Central Railroad meant prestige for Northfield and prosperity for its citizens – hundreds worked for the line.

In 1852, Paine lost control of his railroad. Over the next decade the new owners gradually moved operations to St. Albans. John Gregory Smith, the new president, said he would "make the grass grow in the streets of Northfield." He very nearly succeeded. The town's population, one of the largest in Vermont at the time, dropped precipitously and over fifty houses stood vacant. It took 25 years to recover from the loss.

Slate quarrying and finishing, which started early in the nineteenth century, provided some respite. In the 1860's and 1870's some two hundred men worked for the slate companies, but by the 1880's this industry too was in decline.

The next savior was granite. In 1889 investors built a spur line and a small finishing shed on railroad land and arranged to have granite brought down from the Barre quarries. Several more sheds were eventually constructed, and by the outbreak of World War I, over 525 people were employed in the sheds.

Times changed, and by 1954 only the Rock of Ages plant was left, and that too was closed when the head office decided it was too expensive to ship the rough stone here. In 1999 Cetrangolo Finishing Works, founded in 1955, was the last to close. As of August 2000, the Cetrangolo Finishing Works building has been demolished and the site is vacant.

In the end, economic rejuvenation came from what at first might have seemed an unpromising source. Late in 1886, the faculty and student body of Norwich University arrived in town. Their arrival followed acceptance by Norwich trustees of a bid by a group of citizens to have the college relocated here. It is doubtful that anyone seeing the four teachers and fourteen students arrive imagined that the college would become the town's largest employer.

and economic health to the community for decades.

The Great Depression hastened the end of many businesses. Henry Ford and his competitors made the demise of other businesses certain. Mass production of the automobile and a revived national economy after 1945 put Vermonters on wheels and took them out of town to work and shop. The importance of the automobile as a bringer of change cannot be overstated. In Northfield, as elsewhere, it meant workers no longer had to depend on local businesses for jobs and shopping opportunities; they could drive anywhere employment was available and goods were for sale.

As manufacturing jobs declined, the importance of Norwich University increased. About 1950, Norwich, Rock of Ages, and the Nantanna textile mill each employed approximately 140 people. By 1963, Rock of Ages went out of business. Though the college has seen ups and downs over the past 125 years, its presence has been an economic force for the community and a social and cultural life Northfield probably would not otherwise have seen.

Since World War II, population growth has been slow but steady. The town has seen none of the large-scale tourism that has brought mixed blessings to other Vermont towns. While no large industry has come to town, a number of small businesses have sprung up. Slightly more than half of the Northfield labor force worked out of town. Over two centuries, Northfield evolved from farming to manufacturing to a mix of small businesses and a college town economy.
