5:00 Adjourn

Persons with disabilities who require assistance or special arrangements to participate in programs or activities are encouraged to contact us at 802-229-1015 or cvrpc@cvregion.com at least 3 business days prior to the meeting for which services are requested.

¹ All times are approximate unless otherwise advertised

Winooski River Basin Water Quality Council Application Form

The Central Vermont Regional Planning Commission (CVRPC), the Clean Water Service Provider (CWSP) for the Winooski River basin, is conducting outreach efforts to identify candidates who wish to serve as municipal representatives on the Basin Water Quality Council (BWQC). There are 49 municipalities in the Winooski River Basin. We are currently seeking a municipal representative to be appointed as an alternate on the BWQC. We encourage you to share this announcement widely within your municipality.

The purpose of a BWQC is to establish policy and make decisions for the CWSP regarding the most significant water quality impairments that exist in the basin and prioritizing water quality restoration projects that best address existing impairments identified in the Tactical Basin Plan. You can find more information about the BWQC on the attached flyer. CVRPC is seeking members with the following expertise:

- Knowledge of water quality, impairment and restoration
- Interest in prioritizing and selecting clean water projects for funding
- Interest in participating in the Tactical Basin Planning process
- Ability to attend BWQC meetings

Please complete the application form on the following pages and submit to CVRPC via email (frasca@cvregion.com & voigt@cvregion.com) or mail (29 Main Street, Suite 4, Montpelier VT 05602). Please contact Lincoln Frasca (frasca@cvregion.com) with questions.

Thank you in advance for your interest in the Winooski River BWQC!

Sincerely,

CVRPC Natural Resources Program staff:

Brian Voigt, Program Manager
Lincoln Frasca, Planner

Winooski River Basin Water Quality Council Application Form

Please submit completed Application Form to CVRPC via email (frasca@cvregion.com) or mail (29 Main Street, Suite 4, Montpelier VT 05602). Thank you!

BWQC Representative Category (please choose one)

Name: Rachel Tobler

Mailing Address: 5420 Shelburne Road

Shelburne, VT

05482

Phone: 802-264-5065

Email: rtobler@shelburnevt.org

Preferred method of contact: Mail Phone Email

Municipality: Town of Shelburne

Please describe:

1) Your interest in serving on the Winooski BWQC:

I am interested in serving on the Winooski BWQC because our water quality and systems are all connected with rivers, streams and tributaries, the work and efforts that are completed in other parts of the state effect us here in Shelburne and vice versa. I would enjoy being part of the BWQC to gain a broader perspective of water quality work throughout the Winooski River Basin. Furthermore, one of Shelburne's most treasured and unique outdoor spaces, Shelburne Pond, has fallen victim to harmful algae blooms and excessive nutrient levels. The Shelburne Stormwater Utility is actively looking for innovative solutions for treating the pond and we are open to new solutions and ideas. I believe BWQC would give me amazing exposure to a whole wealth of knowledge and solutions, that can apply to our issues at the pond.

2) Your experience representing municipal perspectives:

During my entire professional experience I have represented the interests and goals of a municipality. In my previous work experience I was the construction inspector hired by the city and represented the city's interests on the project. I worked closely with municipal staff and community members. In my current position I am very excited to be on the Municipal side of permitting and project implementation and continue to represent a municipality, this time the Town of Shelburne, in a helpful and enthusiastic way. Working for the Shelburne Stormwater Utility has provided me with a whole new perspective on how much time, money and coordination goes into project implementation.

Application continues on next page

Please describe your knowledge & experience related to the following topics.

1) Stormwater and developed lands (for example, municipal separate storm sewer systems, roads, other developed lands discharges):

I provided construction oversight for a large scale project where municipal storm systems were built and an underground sand filter was installed for stormwater treatment. I conducted stormwater inspections for a variety of systems and am familiar with the functions of both traditional and innovative stormwater treatment practices and structures. I have completed a permit renewal process for an individual stormwater permit (INDS). I have practice calculating impervious area using mapping programs to determine percent impervious coverage and use it to determine stormwater treatment requirements.

2) Natural resource protection and restoration (including river corridors, floodplains, wetlands, riparian and lakeshore corridors, woody buffers):

In fall of 2024 I completed a Wetland Certificate Program through the University of New Hampshire. Within this program I learned wetland functions, plant ID, wetland rules and regulations and delineation. I am familiar with the Vermont state shoreline protection rules and permitting process, and methods to stabilize shorelines using a mix of hard and soft engineering techniques. In 2024 I attended the state offered shoreline stabilization seminar and learned about new stabilization techniques. I have been involved in natural restoration efforts of a river corridor particularly intervention with coarse woody debris.

3) Forests, forested land, and interaction with water quality:

During my education at the University of Vermont I took multiple classes regarding forest health, composition and the impact forests have on water quality. Many of these classes and field experiences focused specifically on Vermont forests. I can read natural trends within forest ecosystems, identify indicators of forest health and understand the importance of a forest block in a larger ecological community. I studied soils within forest ecosystems and the importance they play in groundwater retention, transfer and rainwater and stormwater absorption.

4) Agriculture, agricultural lands, and their interaction with water quality:

Within the State of Vermont, agricultural impact on Lake Champlain and our water quality is evident by harmful algae blooms each summer and phosphorous reduction goals that communities are required to meet, Shelburne having a p reduction goal of our own. This was emphasized heavily in my studies, where we learned how excess phosphorous impacts systems. I took classes that focused on regenerative agriculture practices and restoration of agricultural lands. I had the opportunity to work and interview regenerative farmers and understand the practicality and benefits of certain regenerative practices towards improving water quality.

5) Water quality planning and implementation:

My new position as Stormwater Coordinator with the Town of Shelburne is some of my first experience with water quality planning. Previous to this position I was working at an engineering firm where I got more experience with oversight, implementation, permitting and design. I was very excited at the start of this position to work more on planning and looking at long term goals for water quality. I am beginning to assist the Stormwater Superintendent at the town with project planning around our MS4 and 3-acre sites. The Stormwater Superintendent and I are working to start a testing program for the stormwater treatment practices within Shelburne to test effectiveness.

6) Any additional information you would like to add:

I am new to the municipal and stormwater specific field but I am eager and would like to take a running start into the wide variety of projects and solutions being applied in the Winooski River Basin. I have applicable permitting knowledge from Shoreline, to Act 250 to Stormwater. I also would appreciate being surrounded by other professionals in the field and learn from them and their knowledge and experiences. I believe this experience would make me a much better Stormwater Coordinator and allow me to serve the Town of Shelburne in the best way I can.

Central Vermont Regional Planning Commission

MEMO

March 24, 2021

To: FY23 Nominating Committee
From: FY22 Nominating Committee
Subject: Roadmap and Lessons Learned

With CVPRC's practice to not have member overlap from year to year, Nominating Committee is unique among CVRPC's committees in having no institutional memory. This makes the process of nominating full slates of nominees for all of CVRPC's committees challenging. This memo is intended to provide a roadmap for our successors by sharing our process and lessons learned.

Task 1: Review the Nominating Committee Rules of Procedure and Guidance. This is your official charge from the Commission. The guidance provides some criteria for committee membership; we identified the following additional criteria:

- Are there committees for which a balance of perspectives is very important?
- Match those who want to serve on a committee with a committee they are interested in.
- Integrate new commissioners on a committee to build ties with the Commission's work.
- To the extent possible, avoid placing a commissioner and an alternate from the same town on the same committee.
- When possible, use continuity of members to maintain institutional knowledge.
- When possible, introduce new views and develop commissioners by integrating new committee members.
- People who only want to serve on one committee should only serve on one committee.
- If there is sufficient overall interest in serving, limit the number of committees to two (or three) per person, so that other commissioners also can serve.
- Try to ensure that there is potential leadership on the committee (not necessarily the chair).
- Try to ensure big town/small town balance on committees.

Task 2: Obtain a current membership list for all committees, including when everyone's terms ends.

Task 3: Contact Executive Committee members to determine whether they want to continue. By practice, the chair serves two one-year terms in that capacity and the past-chair serves two one-year terms as an At-Large member before rotating off the committee.

Task 4: Ask all Commissioners and Alternates whether they want to serve on a committee. We had staff email a short questionnaire that asked whether they wanted to serve on a committee, their 1st, 2nd and 3rd committee choice, and whether they were willing to serve on more than one committee. Staff compiled all the responses in an Excel workbook, with an overall summary tab and separate tabs for each committee. This was very helpful. Staff can provide you copies of the questionnaire and Excel workbook for you to use or adapt.

Task 5: Figure out nominations for Officers and Executive Committee first. Each member of Nominating Committee identified three possible persons for Officers and each open position. We discussed each name then ranked our top three candidates. The top one or two candidates became apparent quickly. Commissioners who are not on Executive Committee may not indicate an interest in serving on this committee; if filling an open seat you may have to ask someone if they are willing to serve. Contact proposed nominees and confirm that they are willing to serve in the capacity you are trying to fill; you may need to ask your second choice. One of the challenges is that many good candidates may be willing to serve on Executive Committee but may not be willing or able to serve as an Officer. When filling an open position on Executive Committee, it is a good idea to think of who would make a good future chair.

Task 6: Figure out nominations for the other committees. This may take more than one meeting. We found it helpful to first identify “core” members for each committee, usually key members who could provide continuity but occasionally also members who could provide leadership to the committee (not necessarily as a chair). Afterwards we each proposed a few names who expressed an interest in the committee and who could provide fresh views (turnover) and committee balance. It is a puzzle! Some Commissioners are already serving unexpired terms on committees. Other Commissioners only want to serve on one committee. We tried hard to make sure that everyone who wanted to serve was nominated for a committee, and also that no one served on more than three committees. It took a few repetitions for each committee to have a consensus on a proposed slate, but it was easier than we thought it would be.

Task 7: Confirm that proposed nominees will accept the nomination and serve if elected. It would be embarrassing for everyone to nominate someone who didn’t want to serve in that capacity! We divided this task up and reached out individually by phone or email, as seemed most comfortable. We sent email confirmations to staff, who kept track of the responses.

Task 8: Propose a draft slate of nominees for Officers and Executive Committee in April. This is per the bylaws. We prepared a memo to put in the Board agenda packet. Staff can provide you a copy of the memo we used for you to adapt.

Task 9: Propose a final slate of nominees for all positions in May. This is also per the bylaws. We were actually done well in advance. Again, we prepared a memo to put in the Board agenda packet. Staff can provide you a copy of the memo we used for you to adapt.

If this roadmap has been helpful, please consider updating it and have staff file it with materials for the next Nominating Committee.
